RIAZ IJAZ

Wah Cantt, Pakistan | 0320-5065689 | riazijazuet@gmail.com | LinkedIn

PROFILE SUMMARY

Computer Science graduate (UET Taxila, GPA 3.66/4.0) with hands-on experience across deep learning and full-stack web development. Contributed to an award-winning (1st position) deep learning research project for automated skin disease diagnosis, and interned as a front-end developer building responsive, cross-browser web applications. Comfortable owning technical work end-to-end from data pipelines and model training to shipped, user-facing products.

EDUCATION

Bachelor of Science in Computer Science *Sep 2022 – Aug 2026*

University of Engineering and Technology (UET), Taxila | GPA: 3.66 / 4.0

FSc Pre-Engineering *2020 – 2021*

The Scholars Science College, Wah Cantt | Marks: 760/1100 (70%)

Matriculation (Science) *2017 – 2019*

Pioneer Islamic Public School, Wah Cantt | Marks: 882 / 1100 (80%)

EXPERIENCE

Front-End Web Developer Intern — Haashes *Jun 2025 – Aug 2025*

- Built responsive, cross-browser web applications with HTML, CSS, and JavaScript, focused on improving usability and user engagement.
- Streamlined front-end build workflows using Webpack and Gulp, reducing deployment overhead.
- Worked with design and backend teams to translate mock-ups into functioning, mobile-friendly interfaces.

TECHNICAL PROJECTS

Skin Disease Detection — Final Year Project *Apr 2025 – Jun 2026*

1st Position among all competing FYPs, Dept. of Computer Science, UET Taxila

- 3-person research project benchmarking five deep learning architectures (ResNet50, DenseNet121, EfficientNetB3, ViT-B16, ConvNeXt Tiny) for 7-class skin lesion classification on the HAM10000 dataset (10,015 dermatoscopic images, 58:1 class imbalance).
- Owned the data pipeline: dataset acquisition, exploratory data analysis, preprocessing (resizing, normalization, stratified train/val/test split), and built the augmentation pipeline (rotation, zoom, flip) used across all five models.
- Trained and benchmarked the baseline CNN architectures (ResNet50, DenseNet121), surfacing an “accuracy paradox”78.38% raw accuracy but poor recall on rare, potentially malignant classes — that shaped the team's shift to Categorical Focal Loss.
- Co-authored the final report; the team's best model (ConvNeXt Tiny) reached 76.09% accuracy and 89.22% Top-2 accuracy, and was deployed as a full-stack diagnostic web app (FastAPI + React).

Text-to-SQL Translation (T5 Model) *Jan 2024 – May 2024*

- Built an NLP pipeline using a fine-tuned T5 transformer model to translate natural language English queries into functional SQL commands.

Engine Efficiency Analyzer *Aug 2024 – Dec 2024*

- Deployed an LSTM neural network to analyze and predict engine efficiency from crankshaft-angle data using Excel-based datasets.

Full-Stack E-Commerce Website *Jan 2025 – May 2025*

- Developed a full-stack e-commerce website with a relational SQL database for backend data management.

SKILLS

Programming: Python, C++, Java, JavaScript, HTML & CSS, SQL

AI / Machine Learning: Deep Learning (CNNs, LSTMs, Transformers, ConvNeXt), TensorFlow, Keras, NLP, Scikit-learn, Pandas, NumPy, OpenCV

Web Development: React.js, FastAPI, Webpack, Gulp, Responsive Design

Other: Git, Agile Development, Project Management

Certifications

Supervised Machine Learning: Regression and Classification: Stanford Online / DeepLearning.AI (Coursera) | Dec 2025

NESTGEN Masterclasses: Nestlé YOUth (Computer Engineering, Purpose-Driven Marketing, Power Brand Building) | Jul 2026

Huawei ICT Academy Network Certifications: HCIA-Datacom V1.0, Computer Network, General Knowledge of Computer Networks | Oct 2026
